## DETAILED ACTION

### *Election/Restrictions*

The claims are deemed to correspond to the species listed above in the following manner:

1) A light-emitting thyristor having Al concentration increasing in an AlGaAs layer just above the buffer layer, or including a strained layer superlattice just above the buffer layer. (claims 1-5, and claims 12-17 as depending from claims 1-5)

2) A light-emitting thyristor wherein an uppermost layer from which light is emitted is InGaP, InGaAsP, or AlGaInP. (claims 6-8, and claims 12-17 as depending from claims 6-8)

3) A light-emitting thyristor wherein an impurity concentration of at least the part of the anode layer near the n-type gate layer is lower than an impurity concentration of the n-type gate layer. (claims 9-11, and claims 12-17 as depending from claims 9-11)

No claims are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Controlled Al content of a layer overlying a buffer layer, use of wide-bandgap material as a light emitting later, and controlled impurity concentration of the anode layer near the n-type gate layer, are three independent inventions, each imparting a distinct and separate improvement to the thyristor.

Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
